

No. 4

The average man's heart pumps almost 2,000 gallons of blood each day. That is how much water some fire departments' tanker trucks can hold.

Directions:

Guide students to convert the gallons to quarts (8,000), to pints (16,000.02), or to ounces (255,995.9).

For younger students, print from the Internet a photo of a fire department tanker truck. Ask questions like “Does the tank hold more or less liquid than a bathtub?” and “Does the tank hold more or less liquid than the ocean?”
