Heart Hero

Julianna

Survivor, Grade 6

At age 2, Julianna was diagnosed with Wolff-Parkinson-White Syndrome, which caused rapid heartbeats and made her life challenging. Between medications and heart monitors, her condition made her feel frustrated and lonely. After a successful heart procedure in 2024, Julianna no longer needs medication and says her heart readings have been perfect ever since.

Julianna keeps her heart healthy by playing basketball, swimming and eating nutritious foods. Though she sometimes feels anxious when her heart races, Julianna is grateful for her family's support and wants to share her story through the Kids Heart Challenge/American Heart Challenge to give others hope.

The **Kids Heart Challenge** and **American Heart Challenge** funds research that helps kids have longer and stronger lives. Your support helps families have hope and for that they are so grateful.

Together, we are creating a world of longer, healthier lives.
